What this is

This is about a discussion with the university community about the 'teacher function'.

This is speculative and meant to stimulate discussion.

This is not proscriptive.

Where this emerged

"...the 'teacher function' might become less a question of living teacher presence and more an assemblage of code, algorithm and teacher–student agency"

"The teacherbot explicitly worked with the idea that teacher automation does not have to be about rationalism and instrumentalism: 'botty' was not intended to 'solve' any productivity deficits in teachers, or to replace teachers, but rather to explore how an assemblage of teacher-student-code might be **pedagogically generative**."

Bayne, S. (2015). Teacherbot: interventions in automated teaching. *Teaching in Higher Education*, 20(4), 455-467.

The driving questions

What is pedagogically generative in this space (and what might generative look like across disciplinary boundaries)?

What does an expanded 'teacher function' look like?

What impact might this have on transactional distance (Moore 2013)?

What role might this serve in redefining the student experience?

What are the ethical complications?

Where does this sit in our near future?

Use appropriate technology, including AI-supported methods, to enable peer assessment, self assessment and timely formative feedback.

Critically evaluate and build capacity for high quality automated assessment and feedback appropriate to disciplines, as a way of augmenting and supporting human assessment.

What are chatbots?

- provide users with a response to a query or statement working from a knowledge base of predefined statements/answers
- can leverage aspects of AI (Natural Language Understanding, Natural Language Processing, machine learning)
- Omni Channel
- Voice or text

A screenshot of the Hubert AI website homepage. The page has a light beige background. At the top left is the Hubert logo, which consists of a stylized 'H' inside a circle followed by the text 'HUBERT' and 'BETA' below it. To the right of the logo is a navigation menu with links for 'HOME', 'HOW IT WORKS', 'RESOURCES', and 'LOGIN/SIGNUP'. Further right is a search bar with the placeholder text 'Email address' and a red 'Subscribe' button. The main heading is 'Improvement starts with conversations' in a bold, red font. Below this is a sub-heading 'Welcome to a new era of feedback handling'. The central focus is a video player showing a presentation with the Hubert AI logo and the text 'HUBERT.AI' on a screen. Below the video player is a horizontal row of colorful icons representing various fields: a rocket, a factory, a pencil and ruler, a graduation cap, a robot head, a classical building, a modern skyscraper, a speech bubble, a microscope, and a pie chart.

Bot 1: Virtual Assistant

Bot 1: Takeaways

Pros

- Quickly direct you to answers
- Multi-platform
- 24hr access to queries
- Audio or text based
- Repetitive queries
- "No need to speak to a human!"

Cons

- Limited in how much it can answer
- Reliant on internet
- Difficulty in dealing with complex dialogue
- Loops, loops and more loops!
- Ambiguity
- "Where is the human?"

What this is

- An ongoing programme of work to engage the University of Edinburgh community (students and staff) around emerging technologies in education and their role in teaching and learning through speculative methods
- An ongoing series of events and workshops both online and off to begin to develop a shared vision of what we want these emerging technologies to provide
- An ongoing body of evidence and research emerging and being actioned

Proposed outcomes

- Some indication of where the pedagogically generative spaces are
- Some ideas around what post digital pedagogies are
- An evolving methodological approach towards values-based education
- Some indication of whether or not we want to pursue this further
